# WHY?

Vicinity delivers a management system that grows with your business. From QuickBooks to Microsoft Dynamics. We are committed to providing a valuable, feature-rich solution at an affordable price.

And that's just the beginning. Our sole focus is on the unique issues of brewers. Go ahead, put us to the test.

# Take a look at 17 more reasons you need to consider Vicinity.

## 1. INVENTORY CONTROL

Record the usage of ingredients against a log as you consume them, even before a log is completed. Gain visibility into your inventory flow, and compare logs to pinpoint and correct variances.

## 2. PRODUCTION SCHEDULING

Visualize the production schedule via calendar or Gantt Chart. Manipulate start and stop dates and reassign to available equipment with drag and drop functionality.

## 3. AUTOMATED BROP/TTB REPORTING

Streamline the authoring of Brewers Report of Operation (BROP), eliminating the labor and costs involved in consolidation data. Production is tracked and categorized as it is entered into the system. Once done, the BROP can be generated on demand by authorized users within Vicinity, your ERP system or over the Internet.

## 4. SCALEABLE ACCOUNTING PLATFORMS

Stay on QuickBooks and connect Vicinity's robust production feature set, or integrate Vicinity with Microsoft Dynamics. With an interchangeable financial backend, Vicinity is a scalable software solution. Sharing CRM, inventory, sales and purchasing data rounds out Vicinity to be a world class ERP solution.

## 5. ACTUAL COSTING

Track all production costs to a log, including ingredients, labor, machine costs, and factors in yield. The result is a comprehensive cost per barrel produced on each log.

## 6. CENTRALIZED RECIPE MANAGEMENT

View recipe management as integral to your operation rather than an afterthought. Pilot brews can be segregated from production formulas to ensure experimental formulas do not make their way into production. Each recipe can be assigned its own set of searchable attributes, so users can quickly find the recipe needed.

## 7. COMPLEX PROCESSES

Define your processes the way you operate, rather than adjusting your records to fit system standards. This flexibility allows Vicinity to easily support processes from creating multiple packaged items from a single brite tank, tank blending, and barrel aging.

## 8. COMPREHENSIVE PRODUCTION PLANNING/MRP

Dramatically reduce investment in safety stock without the risk of coming up short. By assisting in developing and maintaining production schedules, we help increase scheduling accuracy and reduce inventory levels.

## 9. SUPPORT FOR MULTI-SITE OR ALTERNATING PROPRIETORSHIP

Schedule brews and develop capacity plans that reach across all facilities. Easily report production activity by location to comply with TTB requirements.

## 10. YEAST GENEALOGY

Create yeast records and track as by-products to target and tag strains of yeast pitched through various batches while collecting data such as strain, and flocculation rates.

## 11. PILOT BREW TRACKING

Maintain R&D projects including formula comparison, search and costing. Centralize the process of developing and selecting recipes to achieve a flavor profile.

## 12. HOSTED IN THE CLOUD

No need for servers on premise. Vicinity can be hosted in the cloud reducing investment in hardware and software costs on upgrades.

## 13. PROPOSED COST ANALYSIS

Review potential cost changes to formulas for finished goods by maintaining a "Proposed Cost Schedule". As material costs are anticipated, get ahead of the curve by revaluing production costs using these anticipated material costs. A perfect tool for analysing hop contracts.

## 14. QUALITY

Track QC test results at every stage of the brewing process, from inbound materials, brews in process, cellar and packaging for a complete profile of ingredient notes, daily tank checks and more.

## 15. SIMPLIFIED CONTROL SYSTEM INTEGRATION

Stream data to other systems, with instant insight into actual production results on-hand in real-time. Whether the system is a simple handheld, brewhouse system or sophisticated PLC, Vicinity has you covered.

## 16. POWERFUL BUSINESS INTELLIGENCE

VicinityView allows a user to query data in real time by selecting columns and filtering rows without programming or report writing. Sorting, grouping and totaling are all powered by drag and drop technology. All data can be exported to Excel for further presentation.

## 17. ACCESS TO THIRD PARTY SOFTWARE INTEGRATIONS

Connect to leading applications to enhance your brewing operations. Vicinity offers established integrations with a growing list of specialized software vendors in the brewing industry, including: SkuBrain, MicroStar, ShipCompliant and more.

At VicinityBrew, we know beer. We created Vicinity, a brewery management software solution that provides structure, support, and scalability to your business. By implementing Vicinity, you can eliminate outdated, basic, or multiple disjointed systems, and focus on the business of making better beer.

We understand your brewery's production pain points and designed Vicinity to alleviate them. The flexibility of our software system is what makes it so valuable to your daily operations. Vicinity eliminates time-consuming recipe conversions, provides quick and painless batch processing to ease your reporting requirements, gives you enhanced visibility to eliminate inventory blind spots, and much more.

Vicinity is a popular solution for breweries because we deliver a management system that grows with your business. From QuickBooks to Microsoft Dynamics, we are compatible with a variety of accounting platforms allowing you to choose the best fit for your brewery's needs, now and in the future. We are committed to providing a valuable, feature-rich solution at an affordable price, so that it is accessible to businesses at any stage of growth.

At VicinityBrew, we offer implementations and upgrades adapted to suit your needs, responsive ongoing technical support, and accessible expert-level business consultation. We are here to solve your operational challenges, however simple or complex they may be.
